

EX NO:1

AIM:

To estimate the total project cost by defining project tasks, assigning resources with their costs, and calculating the overall project cost using ProjectLibre.

PROCEDURE

1. Open ProjectLibre and create a new project by entering the project name and start date.
2. Add all project tasks along with their respective durations.
3. Define the predecessor relationships between the tasks.
4. Open the Resource Sheet and create the required project resources.
5. Enter the Cost Per Use or Standard Rate for each resource.
6. Assign the appropriate resources to the corresponding project tasks.
7. Allow ProjectLibre to automatically calculate the project cost based on the assigned resources.
8. View the total estimated project cost in the Project Report, record the result, and save the project.

ALGORITHM

1. Create a new project in ProjectLibre and enter the project details.
2. Add project tasks with their durations and define task dependencies.
3. Create project resources and assign the cost for each resource.
4. Allocate the resources to the corresponding project activities.
5. Calculate and view the total project cost, then save the project.
